

PhD scholarships at the International Max Planck Research School (IMPRS)

From Molecules to Organisms

Max Planck Institute for Developmental Biology, Tuebingen, Germany

The special feature of our 3-year PhD program is its emphasis on interdisciplinary interactions. We want to train the next generation of scientists to study complex biological processes that cannot

be adequately understood within the limits of a single discipline. Traditionally separate fields

covered include: - Biophysics - Structural, molecular and cellular biology

- Biochemistry and genetics - Bioinformatics, genomics and proteomics -

Evolutionary biology Training is offered in a range of core and specialised skills; a thesis advisory committee provides individual project guidance.

English is the language of the school; places are fully funded. Please visit following

homepage: <http://www.imprs.tuebingen.mpg.de> **Application deadline: February 22, 2015**

Only online applications will be accepted!
